

HOW TO BUY AND SELL THE BITLAB COIN ON DECENTRALIZED EXCHANGE (DEX)

First, make a note of the BitLab Coin address:

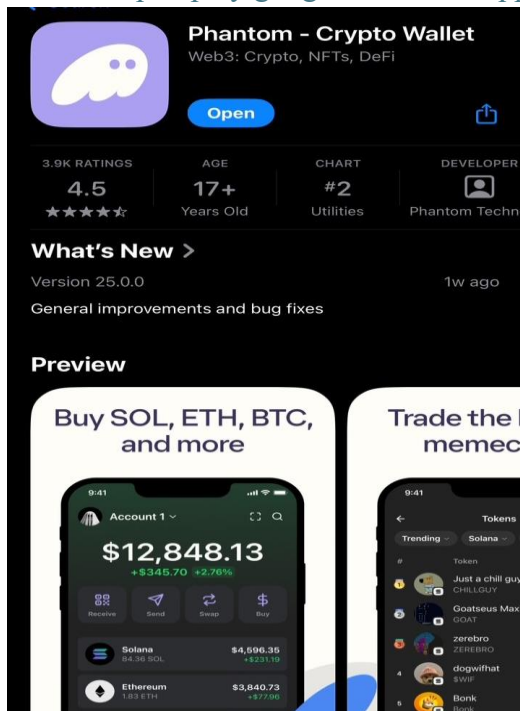

CCVYpFakBd4kkwn7G4rvbpaiB5pGJwUpiNwNYrkC5ygQ

In this example, we use **Raydium** as the Decentralized Exchange (DEX); and we use **Phantom Wallet** which is the wallet where you will keep your money/BitLab Coin.

Step 1: Set Up Phantom Wallet and Fund your Wallet (If you already have Phantom Wallet skip to step 2)

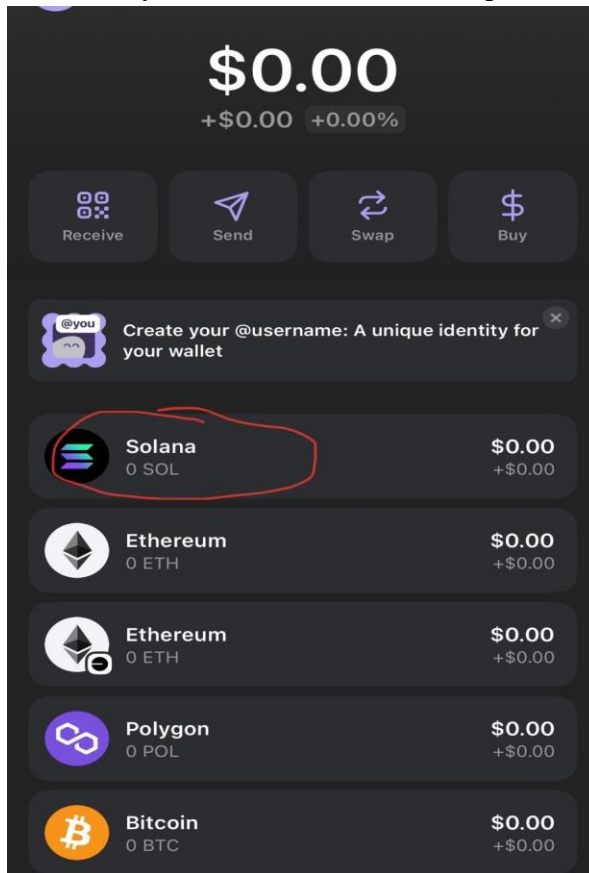

1. Download Phantom Wallet:

- Go to the official Phantom Wallet website: <https://phantom.app/>.
- Download Phantom Wallet: For IOS <https://apps.apple.com/us/app/phantom-crypto-wallet/id1598432977> For Android https://play.google.com/store/apps/details?id=app.phantom&hl=en_US&pli=1

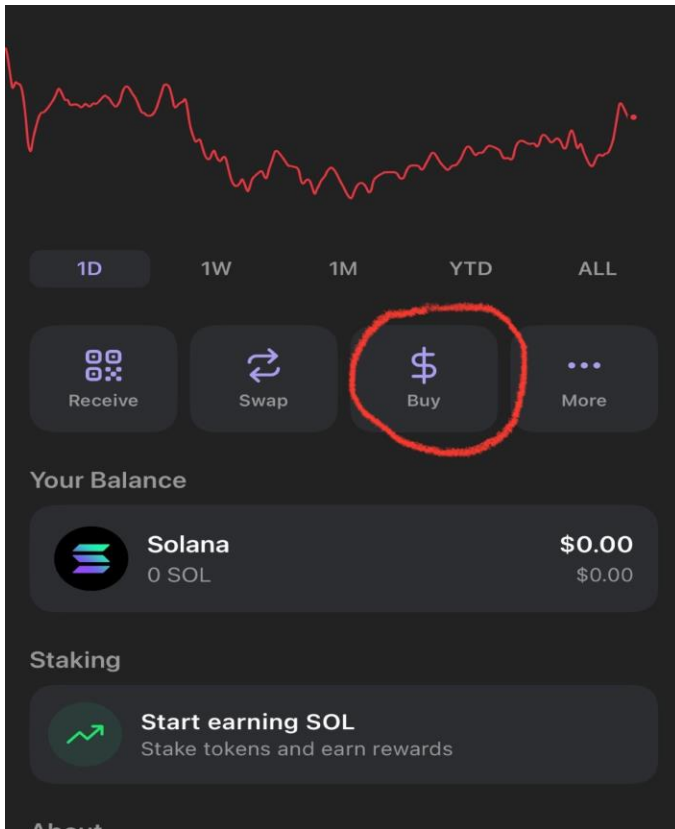

- Another option is to Install the browser extension (available for Chrome, Brave, Firefox, or Edge).
- #### 2. Create a New Wallet:
- Open the Phantom wallet or extension.
 - Click "Create New Wallet".
 - Write down your **seed phrase** (12 recovery words). Store it safely and never share it.

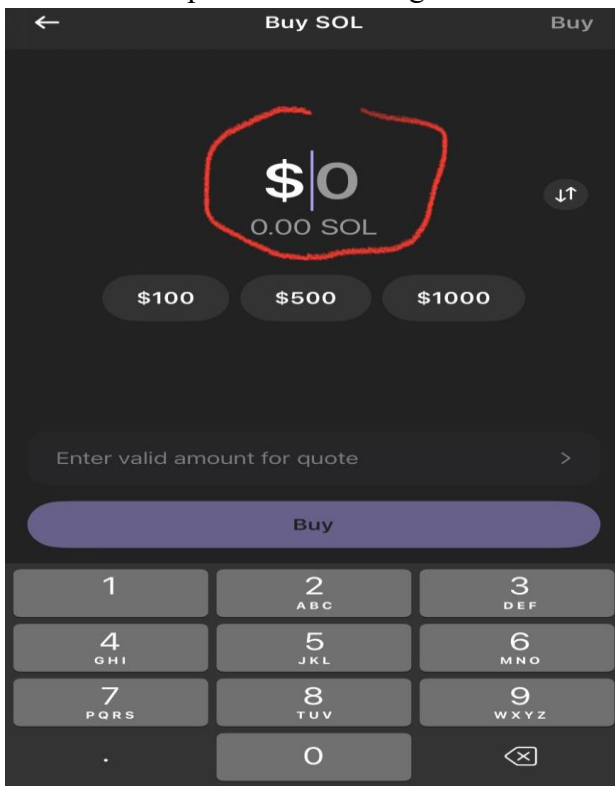

- d. Set a **strong password** for the wallet.
3. **Fund Your Wallet with Solana, USDC, or USDT. You have to have money in your wallet to buy the token. Solana, USDC, or USDT are the optional currencies you will use to buy it in this example.**
- a. Option A: Buy **Solana, USDC, or USDT in Robinhood, Coinbase, or Crypto.com**; then transfer it to your wallet.
 - b. Option B: Buy **Solana, USDC, or USDT** in Token inside Phantom Wallet: In the main page of Phantom Wallet, you should see multiple pre-set crypto coins and they all will have 0. For example, click on “Solana (SOL)”

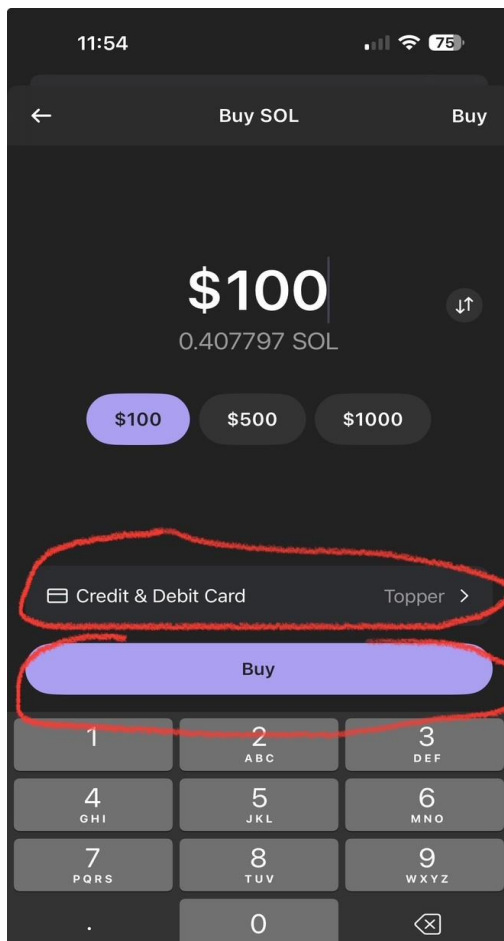

- c. On the Solana page, click on “Buy”

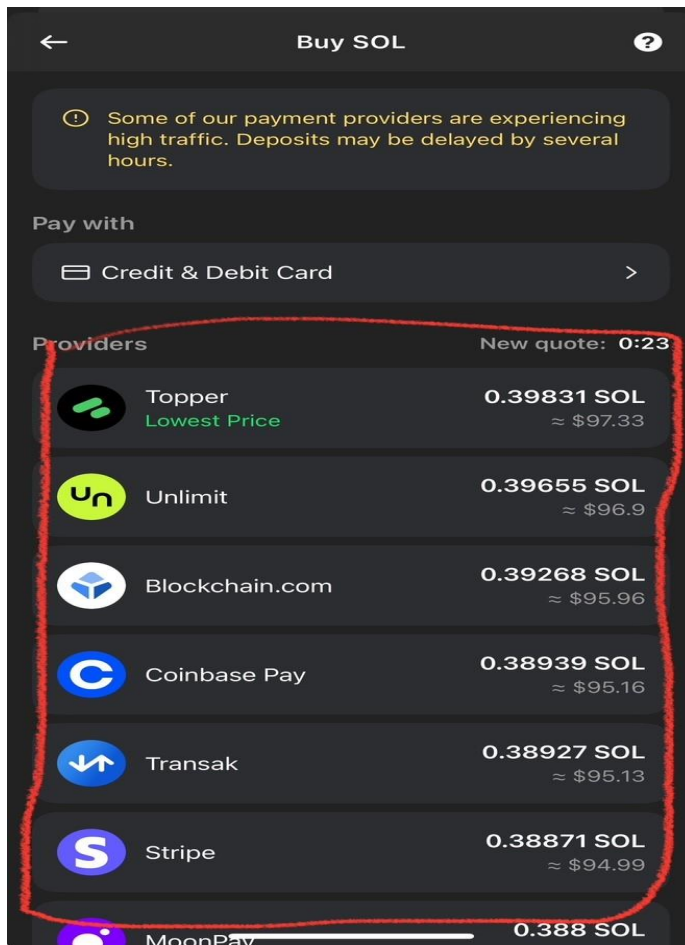

- d. Enter an amount in \$ and, it will tell you how many SOL you will receive based on the price Solana being traded at that specific moment

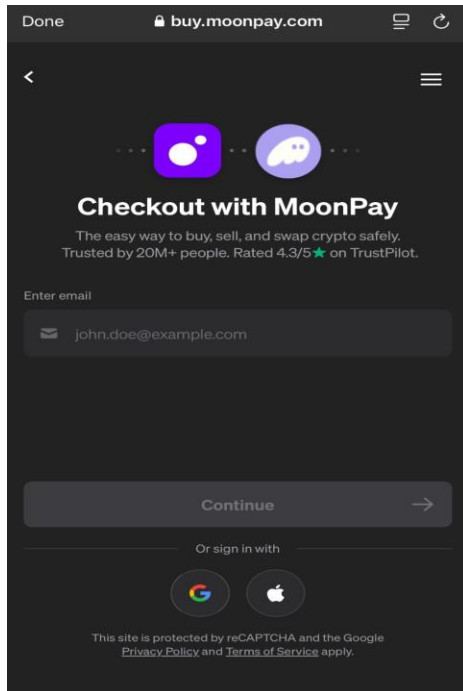

- e. Click on “Credit and Debit Card”

- f. Select any provider on the List (well-know providers are Coinbase, MoonPay, Stripes). You may also see an option to connect to Robinhood.

- g. Click on "Buy" again
- h. It will take you to a webpage where you can complete the transaction. Enter all required information and click continue or submit. It may take a few minutes to receive your token after you complete the transaction.

- i. Once you receive your Solana coin, your wallet is now funded. You can proceed to buy BitLab Coin with Solana Coin. We call that “Swapping” in the crypto world.
- j. An alternative way to fund your wallet is to buy Solana on a Centralized exchanges such as Robinhood, Binance, Coinbase, crypto.com, and transfer it to your wallet. You will pay less transaction fees but it may be a little more complicated for beginners because you have to be very careful when transferring crypto from one wallet to another. We cover that process in details in the guide provided in the “Learn Crypto” page of the website.

Step 2: Buy BitLab Coin in Raydium

1. Best Option: Go to <https://bbspectrum.com/> and click on “BUY BITLAB COIN” or click on the following link
<https://raydium.io/swap/?inputMint=EPjFWdd5AufqSSqeM2qN1xzybapC8G4wEGGkZwyTDt1v&outputMint=CCVYpFakBd4kkwn7G4rvbpaiB5pGJwUpiNwNYrkC5ygQ>.
 The link will take you directly to Raydium exchange to buy BitLab Coin. From Raydium, ensure that BitLab Coin is at the bottom and the crypto you are using to buy BitLab is on top, Click on “Swap,” it will take you to the confirmation page, confirm the transaction. BitLab Coin will show up in your wallet immediately.
2. **Option 2: Directly in Phantom Wallet, go to the search button, enter the BitLab token address CCVYpFakBd4kkwn7G4rvbpaiB5pGJwUpiNwNYrkC5ygQ, Click**

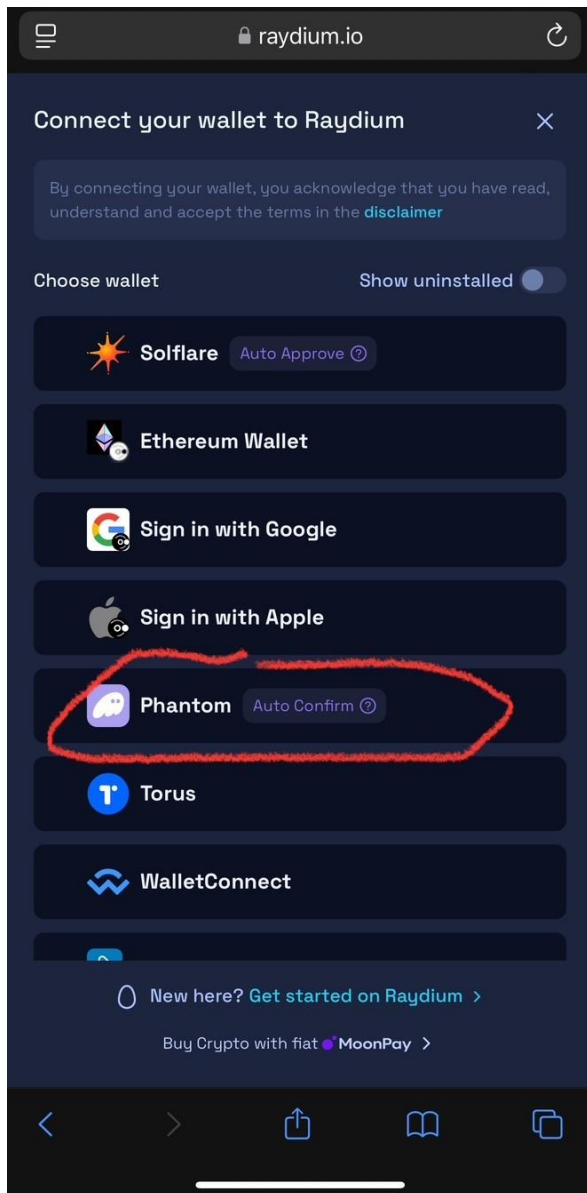

on “Trade,” click on “Buy,” enter the amount you intend to buy, click on “Confirm,” and confirm the trade in your wallet.

3. **Option 3: Go to the Raydium Website:** <https://raydium.io/>. On the Raydium homepage, click “Launch App” to open the trading interface if you don’t already see it.

Step 3: How to Connect Your Phantom Wallet to Raydium

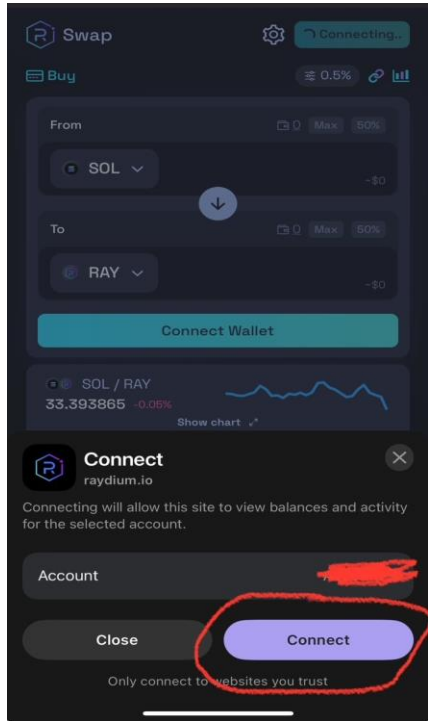

1. **Click “Connect Wallet”:**

- a. In the Raydium app interface, find the “**Connect**” button at the top-right corner.
- b. Select **Phantom Wallet** from the list.

2. **Authorize Connection:**

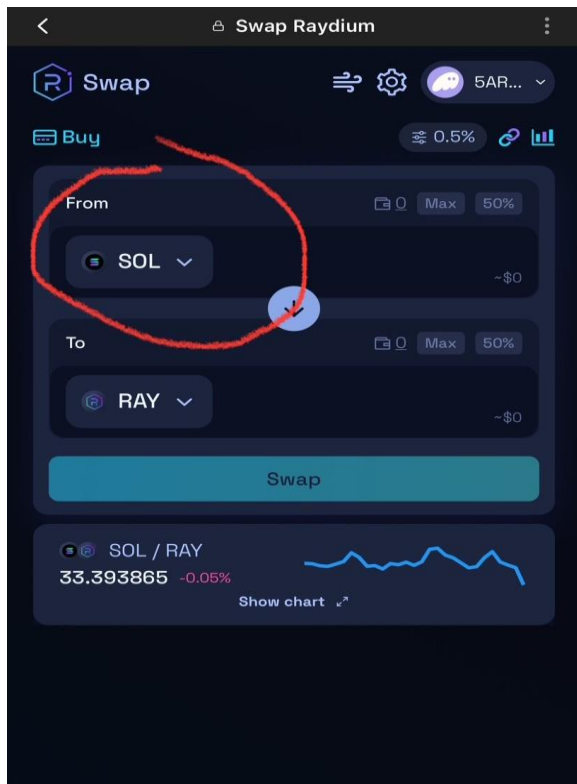

- a. A popup will appear in your Phantom Wallet. Click "**Connect**" again to authorize Raydium to interact with your wallet.

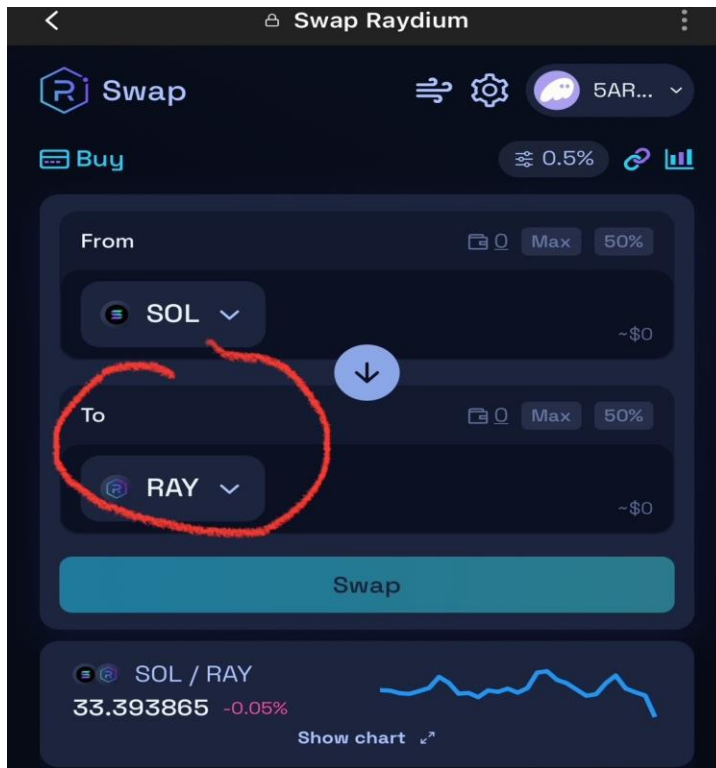

3. Now you should see a few digit of your wallet address on the top right corner where you previously clicked on “Connect.” It indicates that your phantom wallet is connected to the DEX ready to perform transactions.

Step 4: Import the Tokens you intend to SWAP (SOL and BitLab Coin in this case)

1. Still in Raydium, the “From” field is the quote token you are going to use to buy the BitLab Coin (in this case Solana_SOL).” If the top (from) part is not showing SOL click on the little arrow to select SOL.

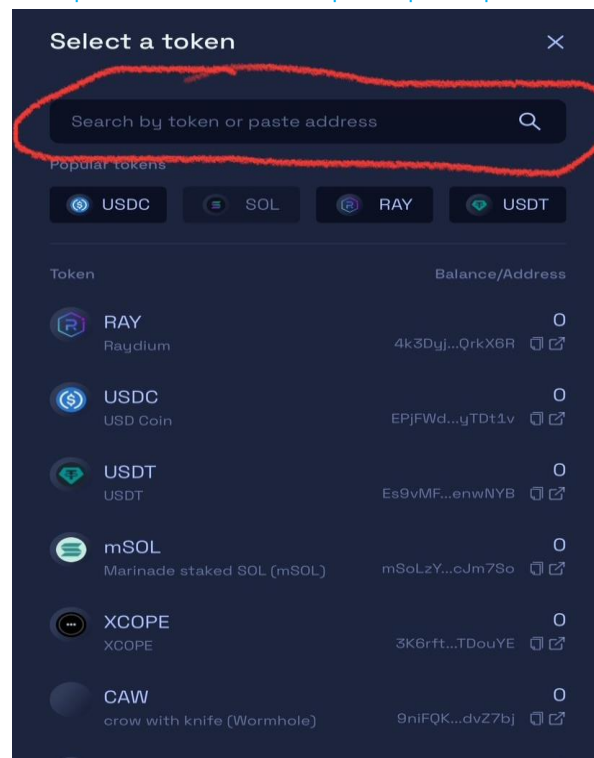

2. In the Raydium app, still in the **Swap** section, you may see RAY or any other token in the “To” field, which is supposed to be the token/coin you want to buy. Since you are not buying RAY, you need to change the “To” field to BitLab Coin. Just click the arrow next to “RAY.”

- a. Once you click on the arrow you will see a search section on top, paste the BitLab Coin address in the search bar:

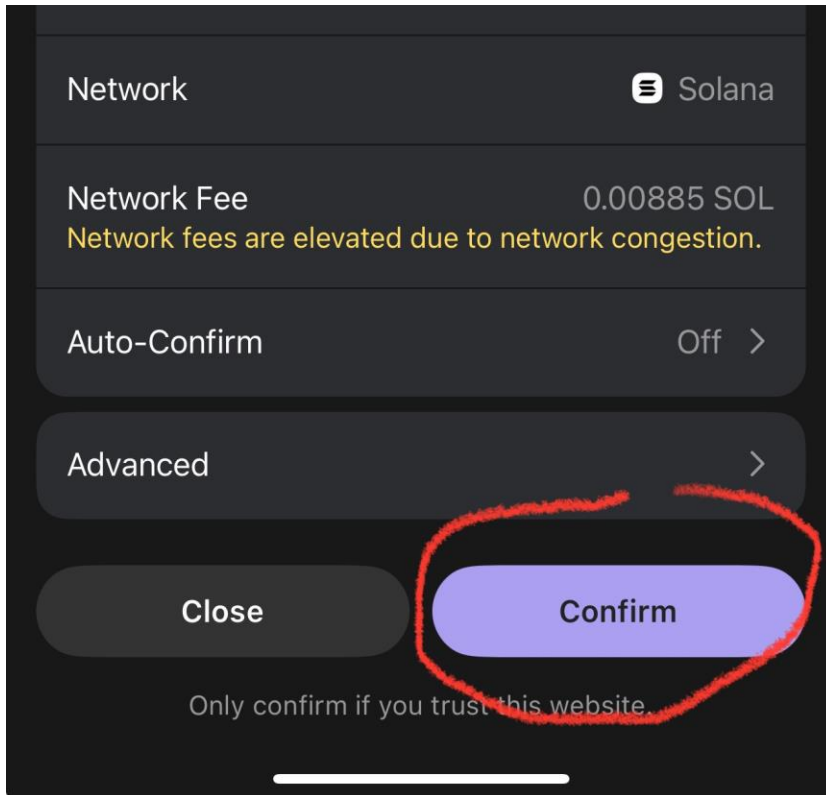

[CCVYpFakBd4kkwn7G4rvbpaiB5pGGJwUpiNwNYrkC5ygQ](#)

- b. It will automatically populate the BitLab coin information as seen below. Just click on the icon of the coin to import it.
- c. Now you will see “SOL” on top and “BitLab Coin” at the bottom as seen below. That means you are about to “SWAP” (buy) BitLab Coin using Solana coin. Note: In Decentralized exchange (DEX) you do not buy a crypto per se, you “SWAP” one crypto for another.

Step 5: Swap SOL for BitLab Coin

1. **Just on the right of SOL, you can see the amount of SOL you currently own. Select Maximum (Max) or select a percentage of your SOL you want to use to buy BitLab Coin (i.e. 50%); or enter a number manually.**
2. Radium will automatically show you how many BitLab Coin you will receive for the amount of Solana you selected.
3. Leave some SOL in your wallet to cover transaction fees in case you decide to sell BitLab later on when its price goes up and cash in your benefit (0.01–0.02 SOL should be more than enough to cover fees).
4. Double-check the details, including token amounts.
5. Click "**Swap**"
6. **Authorize the Transaction:**
 - a. Your Phantom Wallet will pop up asking you to confirm the swap.
 - b. **Sometimes multiple confirmations are needed**
 - c. **Confirm the transactions by clicking "Approve" or “Confirm”**

Step 6: Done

Go back to the “Home” button of your Phantom Wallet. Your BitLab Coin should be there and it will show the amount you own. Congratulations!

Note and extra Details:

1. It may take a few seconds or minutes based on how busy the networks is; then you should see the token in your wallet. You will also see the amount you are holding and how much it's worth in US Dollar or other well-known Fiat currency based on where you live.
 - a. If the token is not visible (very unlikely), manually add it:
 - i. Click **Manage Token List** in Phantom.
 - ii. Paste the contract address
 - iii. And the BitLab coin should pop up.
2. **Verify the Transaction history (transaction history exists forever):**
 - a. Go to the “Activity” tab you will see all your transaction history including the token you just bought.
 - b. You can also go to <https://solscan.io> then search for transaction using your wallet address or to confirm the status of a pending transaction.

Tips for Beginners

1. Double-Check Contract Address:

- a. Always ensure you're using the correct and verified contract address for the token to avoid scams.

2. Keep Funds for Fees:

- a. Always leave a small amount of SOL in your wallet to cover future transaction fees.

3. Use Trusted Platforms:

- a. Only use the official Raydium site (<https://raydium.io/>) and avoid phishing links.
- b. The other DEX platforms previously provided

4. Token Value:

- a. Newly launched or low-liquidity tokens can have volatile prices. Research thoroughly before buying.

We are always open to answer your questions. Reach out to use via the "Contact" tab or social media if you need further guidance.

SELL YOUR TOKEN ON DEX (ALSO USING THE BITLAB COIN)

To sell a token on DEX, you just reverse step 5 above. That means make sure the "BitLab Coin" is on Top and "SOL" at the bottom (that is if you want to receive your fund in Solana).

SUMMARY/TIPS: IMPORTANT

Token Positions in a Swap Interface

1. Selling Token (Token You Want to Sell):

- a. This token should be in the **top position** on the swap interface.
- b. For your case, the **BitLab Coin Token** (contract: [CCVYpFakBd4kkwn7G4rvbpaiB5pGJwUpiNwNYrkC5ygQ](#)) should be selected as the **"From"** token at the top of the swap box.

2. Buying Token (Token You Want to Receive):

- a. This token should be in the **bottom position** on the swap interface.
- b. For example, if you want to receive **USDC** or **SOL**, select that as the **"To"** token in the bottom dropdown.

3. Common Errors to Avoid

• Reversed Positions:

- o If the buying token (e.g., USDC) is in the top position and the selling token (e.g., **BitLab Coin**) is at the bottom, the swap will not work as intended. Always confirm the token positions before proceeding.

• Slippage Issues:

- o Adjust slippage tolerance if you face errors due to price volatility.
- **Token Approval:**
 - o If this is your first time swapping **BitLab Coin** on the DEX, you may need to approve the token first. A popup in your wallet will appear asking for approval.

DISCLAIMER/RISK DISCLOSURE

Digital assets involve substantial risk. The value of any crypto coin/token, including BitLab Coin, may decline substantially as quick as it can increase.

BITLAB COIN is not a bank deposit and is not insured or guaranteed by the FDIC, SIPC, or any other governmental insurance program.

Digital-asset markets may experience substantial volatility, limited liquidity, rapid price movements, market manipulation, technological failures, cybersecurity incidents, regulatory changes, and other risks.

Purchasers should carefully evaluate the risks associated with acquiring and holding digital assets before participating in any transaction involving BITLAB COIN.
